

Niskayuna Copper Test Results

US EPA: An Action Level exceedance is not a violation but can trigger other requirements.
If copper concentrations exceed an action level of 1.3 mg/L (ppm) in more than 10% of customer taps sampled,
the system must undertake a number of additional actions to control corrosion that may include corrosion control treatment (CCT),
The Town of Niskayuna Water Department has already taken action by initiating a corrosion control study in April 2025
