

HOW DOES AMI WORK?

With Advanced Metering Infrastructure (AMI), you will have secure access to your detailed water consumption information online or through an app. You will be able to monitor your usage and set alerts, which may help you identify leaks quickly and avoid unintentional high water consumption. Breckenridge will also be better equipped to help you understand your consumption when you contact us with questions, resulting in an overall better customer service experience for you.

1 Your water meter is fitted with an automatic reading device. Instead of being read in-person, your reading will automatically send to Breckenridge.

2 Breckenridge receives your usage data. Data is collected safely and confidentially.

3 You'll receive your water bill just like before, but now you can log in and view your water usage online in near real-time.
