Downtown Fall River Parking Study

(FALL RIVER, MA- July 24, 2024)- The City of Fall River’s Engineering and Planning Department is initiating a comprehensive Parking Study to address the existing conditions and future needs for parking in the downtown area. The study focuses on major corridors such as North & South Main Streets, Bedford Street, and the streets adjacent to Fall River Government Center. This area features a mix of public and private parking areas, including on-street parking, surface lots, and parking garages.

As the city continues to invest in revitalizing its downtown to better serve property owners, residents and visitors, it acknowledges that sustainable development relies on effective parking strategies. An effective parking management plan, designed to optimize current parking resources without compromising the character of the downtown, is essential for supporting the area’s long-term success. Residents are encouraged to participate in this anonymous survey: [Fall River Parking Study Survey](#).

To address the existing conditions and future needs in the downtown area public feedback is essential in developing a parking strategy that serves residents, businesses, and visitors alike. The survey will remain open until Wednesday, August 21st.

For additional information or questions please contact the Engineering and Planning Department at 508-324-2512.
