RE: Bio-Solids Removal and Land Application

Friday, October 27, 2023
Stewart Spreading – Bio-Solids Hauling

Stewart Spreading will begin hauling bio-solids on Monday, October 30, 2023 from the Waste Water Treatment Facility to a agricultural field in McHenry, IL. This operation should take approximately 2 – 3 days. Residents may experience an odor during the operation. We generate approximately 1.2 cubic yards of dry sludge annually and provide this sludge to local farmers to be used as nutrients for their crops. We produce Class B sludge that can only be applied to fields that grow crops for livestock. This removal occurs annually and will not cause any disruption in service to the residents. Any questions or comments may be addressed by calling the Village Hall at 847-356-8252.
